PORCUPINE, WONDER AMONG GOLD CAMPS

Nuggets and Plasters of Gold in Plain Sight on the Surface.

MANY CAPITALISTS MOVE IN

It's a Rich Man's Game Now-Fields Hard to Get To, but Railroads Planned.

A remarkable discovery of gold has made in a new district in the northern part of Ontario, Canada, called Portrails in the forests of this northern frontier indicate that something extraordipary has happened. The United States has been almost surfeited with booms of this character in recent years, some of like Cripple Creek, Goldfield, Tonopah, the Klondike and booms of less importance, are familiar to every one, while Cobait, in Canada, brought the Dominion into the game. Every little while some new discovery is brought to the atten-

from Porcupine would have one believe

of Toronto, where this Government line connects with the new transcontinental system being built across the northern part of the Dominion. Those headed for the mining excitement get off the train at Kelso, and it is needless to say that all trains are crowded with men headed in that direction. Kelso is a new station and the rest of his journey which he must face, and if he has nerve enough to go in he makes preparations to meet the

but that first dinner tastes better than anything served on Broadway, whatever its character, because by that time the traveller needs it in his stomach.

traveller needs it in his stomach.

AFTER THAT HIKE ON A FRIGHTFUL BOAD.

From Hill's Landing the route is over a new trail, 40 feet wide, cut in the timber and corduroyed part of the way. No stage makes this trip. Here is where the hike commences. Convicts are at work here also, finishing the road. Trees with trunks about eight inches in diameter of uniform size are cut down and made into logs, say 20 feet long, and these logs are laid down close together in the mud and water as a sort of pavement. As soon as freezing weather comes and snow falls these roads will be as smooth as asphalt and sleighs will go over them with horses on the gallop. Just at this time the water and mud freeze only at night and the snow that falls melts in the daytime, consequently the logs roll and it to are slippers and when one least expects. night and the snow that falls melts in the daytime, consequently the logs roll and are slippery and when one least expects it the foot goes down between the logs or the stability of the log is misjudged and the consequences are sometimes painful. Only a part of the road has so far been corduroyed and the rest of the way is something frightful. It should be understood that the timber shades the ground, preventing the sun from absorbing the moisture. A great clay belt runs through this part of the country and the ground consists of clay mixed with the rotted growth and it makes

mixed with the rotted growth and it makes fine composition.

This trail is being followed by a large This trail is being followed by a large number of men each day, some coming out, more going in. The travel helps to mix the mud. In the early morning frozen hunks stick up like so many axes along the way and hurt the feet. A little later, in the warmth of the day, this crystallized surface gives way gradually and one may go in up to the boot tops at every step, while a careless move may submerge one to the waist. If the middle of the road becomes tiresome one occasionally takes to the side of the clearing and leaps from slippery log to more suppery log, now over, now under, sometimes falling, always gasping. In falling it is the rule to fall forward; it takes one that much further along the trail. It is well also to concentrate one's thought on Weston and Roosevelt and feel as capable of doing things.

of doing things. atime and then is almost forgotten or is no longer a matter of public interest. In this last class of camps it may have happened that two or three valuable properties came into existence end fell into the hands of capitalists, and their further history was of little interest to the public. More often it happens that the excitement was entirely unjustified. Greenwater, Ariz, is a striking example. For a time in 1996 the whole mining world was excited about copper discoveries in AT LAST YOU GET TO PORCUPINE. was excited about copper discoveries in Greenwater. Heavy capital was invested there. The whole district is absolutely deserted to-day.

The whole American continent has not been prospected, and it may be that it world is yet to hear of its and the properties the prospected and it may be that it world is yet to hear of its and the properties the prospected and it may be that it world is yet to hear of its and the properties and the properties are in the graph of the general impression is that many other properties in the surface for the most post properties. The whole are employed and meals of the best cooks obtainable are employed and meals of the properties the best cooks obtainable are employed and meals of the properties the best cooks obtainable are employed and meals of the properties the best cooks obtainable are employed and meals of the properties the best cooks obtainable are employed and meals of the properties the best cooks obtainable are employed and meals of the boarding houses on the big mining properties the best cooks obtainable are employed and meals of the boarding houses on the big mining properties the best cooks obtainable are employed and meals of the boarding houses on the big mining properties the best cooks obtainable are employed and meals of the boarding houses on the big mining properties the best cooks obtainable are employed and meals of the boarding houses on the big mining properties the best cooks obtainable are employed and meals of the boarding houses on the big mining properties the best cooks obtainable are employed and meals of the boarding houses on the big mining properties the best cooks obtainable are employed and meals of the boarding houses on the big mining properties the best cooks obtained in the properties are to be uncovered. This is not a mountainous country, and while some of the boarding houses on the big mining properties the best cooks obtained in the properties are to be uncovered. The properties are to be uncovered. The properties are to be uncovered. Th The whole American continent has been prospected, and it may be that the place is crowded with a heterogeneous crowd of men from Rhodesia, London, New York. Montreal and every centre from Porcupine would have one believe hat these deposits have at last been iscovered there. It was the last place would have looked for gold before he tobalt silver district was discovered, from Moneyville. These men are allout on the trails looking at the mines or trying to find mines. At night the place is crowded with a heterogeneous crowd of men from Rhodesia, London, New York. Montreal and every centre from which mining men always come. The famous engineer, the geologist just out of college, the prospector from Nevada and the lumberjack from Ontario mingle on an even footing with the capitalists from Moneyville. These men are allout on the trails looking at the mines or trying to find mines. At night the place is crowded with a heterogeneous crowd of men from Rhodesia, London, New York. Montreal and every centre from which mines or trying to find mines. At night the place is crowded with a heterogeneous crowd of men from Rhodesia, London, New York. t to the last drop-a novice can do it as

striking in a northeastern direction. Here again is the same spectacular showing of free gold on the surface. It is visible everywhere and it would be possible to pick up enough specimens to make a comfortable fortune in a few hours a comfortable fortune in a few hours work. But on this property more work has been done than on any other in the camp, and it is this work that has constantly increased the excitement in the district, for the work has been prosecuted down to the 110 foot level in three different shafts. Two of these shafts are 700 feet apart and the third one is on a line half way between the two. Work is being done to connect these three shafts underground at a depth of 100 feet. The work is almost completed; it is all in very high grade ore. This is evidence that the surface values of the district, and they all bear a strong resemblance, go down

all bear a strong resemblance, go down to depth. In short it indicates that Porcupine is a "comer."

There is a two stamp mill at work here, and out of every three buckets of ore hoisted from the mine one bucket is run through the mill. Enough gold is run through the mill. Enough gold is being taken from this small lot of ore to pay all the expenses of the present mine work. A thirty stamp mill has been ordered.

Stories similar to these might be repeated about the other prominent mines in the district, and as stated there are so far about twelve of them. The chief cause of the excitement is that the formation throughout a large portion of the district resembles what has been uncovered on these principal properties. The gold appears in this white quartz and there is a sprinkling of white quartz and there is a sprinkling of white quartz, throughout the district, sometimes in semall stringers, somtimes in veins, sometimes in lode and sometimes in these dome shaped outcrops. The general QUARTZ SPRINKLES THE WHOLE DISTRICT.

that will outdo everything of its kind in the last century. Hundreds of them are the fortunate owners of property and they are refusing to sell at any seemingly rea-sonable price, but many sales are being recorded for sums higher than \$50,000

a claim.

Few companies have been incorporated and so far this has been a rich man's game. Much sympathy has been wasted in recent years on investors in mining stocks. No one has heard of any symstocks. No one has heard of any sympathy being extended to the capitalists who are buying these claims and putting in plants for developing the properties. These men are the real gamblers in mining. Most of them are well able to play the game. In fact it might be that they have this money to gamble with because they have confined their gambling to mining.

RAILROAD BUILDING IN HAND

New mining discoveries are always made in remote localities and the first questions of interest to a new district are transportation, fuel and power. It is already evident that these questions will

but the Canadian this fuel and no one worries about going ay limit the amount out to gather a fresh supply. At present

mains to be seen how this question will be met. Unlike the deserts of the far Western region of the United States, this country of course has an unlimited supply of water in every direction.

The human interest side of this mining craze must appeal to every one. Stories of poor men getting rich are coming out in manifold form. This camp is not, however, a poor man's proposition. It will require great capital to develop most of the properties, but for all that the poor men are having their day just now there does not a little anxiety in the camp over the condition of the trails, which were daily becoming worse. Those who expected to come out within a short time were worried for fear thin ice would form in the rivers and lakes which would not be strong enough to bear the camps have been waiting for freezing weather to obtain fresh supplies, and these controls taken in in any quantity until the greatest gold mines the world has ever seen, and he thinks it quite likely that ther important mines will be found in the district.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA BUYS IN.

Harry Howard Webb, a man with a string of scientific titles a yard long, who succeeded John Hays Hammond as consulting engineer to the Consolidated Gold Fields of South Africa, made a personal inspection of several of the properties and made the following statement to The Sun representative:

"The three or four veins which I took time to examine in Porcupine presented the most remarkable showing of free three most remarkable showing of free three or four veins which I took time to examine in Porcupine presented the most remarkable showing of free three or four veins which I took time to examine in Porcupine presented the most remarkable showing of free three or four veins which I took time to examine in Porcupine presented the most remarkable showing of free three or four veins which I took time to examine in Porcupine presented the most remarkable showing of free three or four veins which I took time to examine in Porcupine presented the most remarkable showing of the men who were the first comers and who prospected and staked that entire region were for the most part that the prospected and staked that entire region were for the most part to the men who were the first comers and who prospected and staked that entire region were for the most part to the men who were the first dwo prospected and staked that entire region were for the most part to a subject the men who were the first dwo prospected and staked that entire region were for the most part to a subject to a su tales these men orought back to civiliza-tion with them. The big mining capitalists began to send their trusted men into the district to make further reports. These reports have induced the capitalists to make the trip themselves. On the register of the Shuniah Hotel for the last six of the Shuniah Hotel for the last six of the Shuniah Hotel for the last six of the Shuniah Hotel for the last six

some of them are true without doubt. There was a man by the name of Preston opinion that the civil court should move statement:

"It is the biggest gold camp I have ever visited and I am perfectly satisfied. I never saw so many outcrops of gold in quartz leads as I found in Porcupine."

"BEAT, ALL THE EXPERTS AGREE.

Mr. Charles Butters, another high authorities the inventor of Butters's parent."

"There was a man by the name of Preston opinion that the civil court should move the big properties for the work he had done in prospecting it. He sold one-half of his interest to a capitalist and with courts. Justice Tierney on behalf of the Board of Municipal Court Justices said at the meeting that the Justices would at the meeting that the Justices would down town, as the district extended diamonds. Back in camp in his rough miner's garb he bedecked himself with these pretty stones. It was his delightful hobby to display the jewels to every one he met and to brag about his new found wealth. It was his pleasure to expose receipted bills for the money he had paid for the stones. Alas, these prospectors are not all business men! The man in question had parted with a one-sixteenth interest for a mere song compared with what it was worth. Perhaps he will cling to his remaining interest in the mine. Maybe some smarter man will obtain it through the offer of more diamonds.

A LOG CABIN COMMUNITY.

There are no tents or dugouts or shacks built from Standard Oil tin cans in Porcupine. These were very well in Nevada but are not good enough for Ontario.
